

## Working of the Image Management Tool

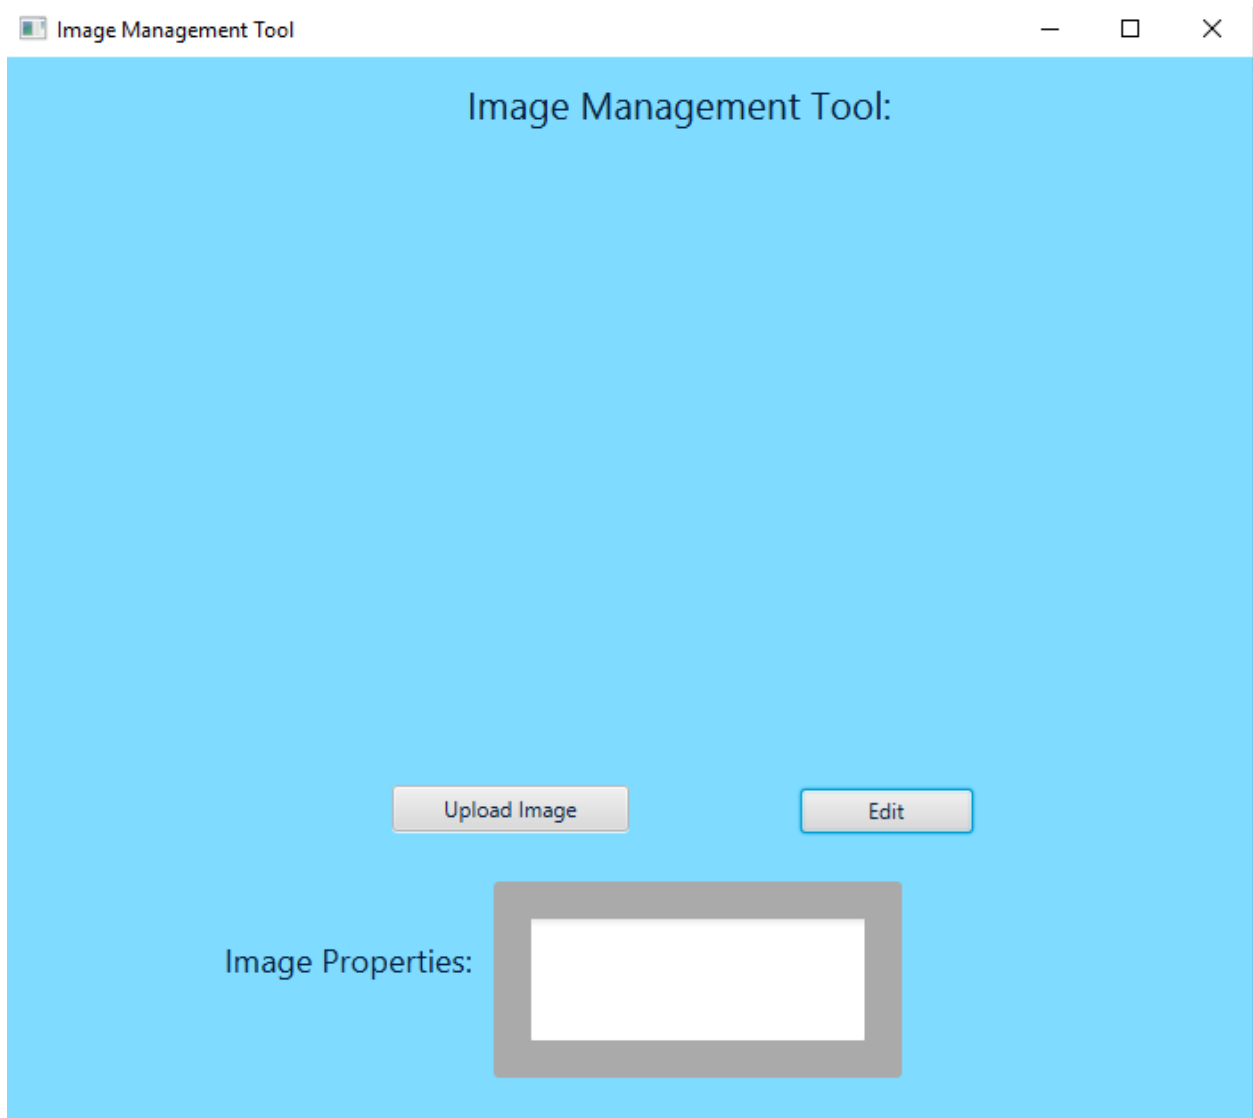

### Step 1:

This is the first screen.

The Upload Image Button uploads an image from local computer.

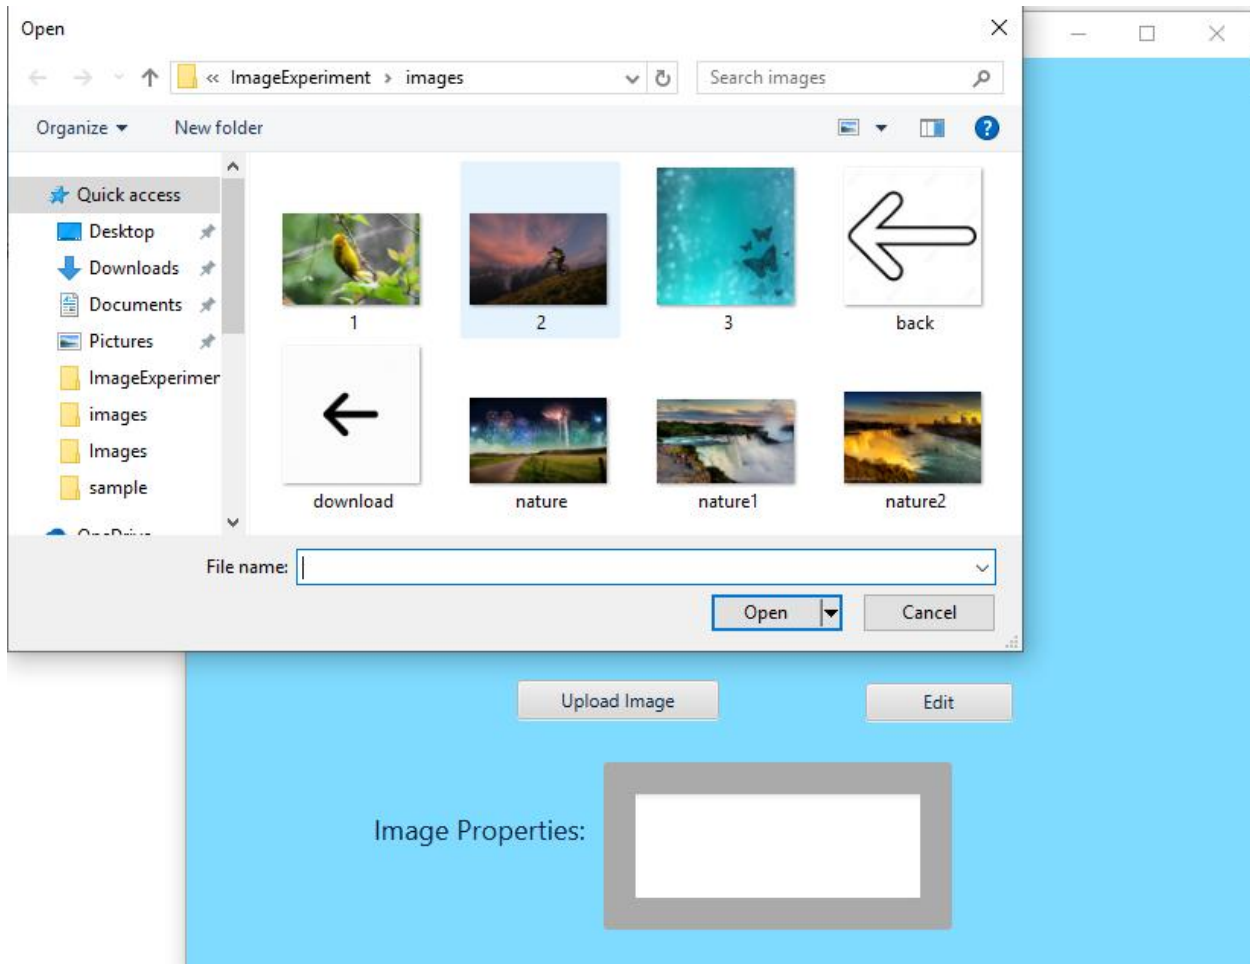

The edit button opens a new edit screen

The image properties are displayed in the box

## Step 2:

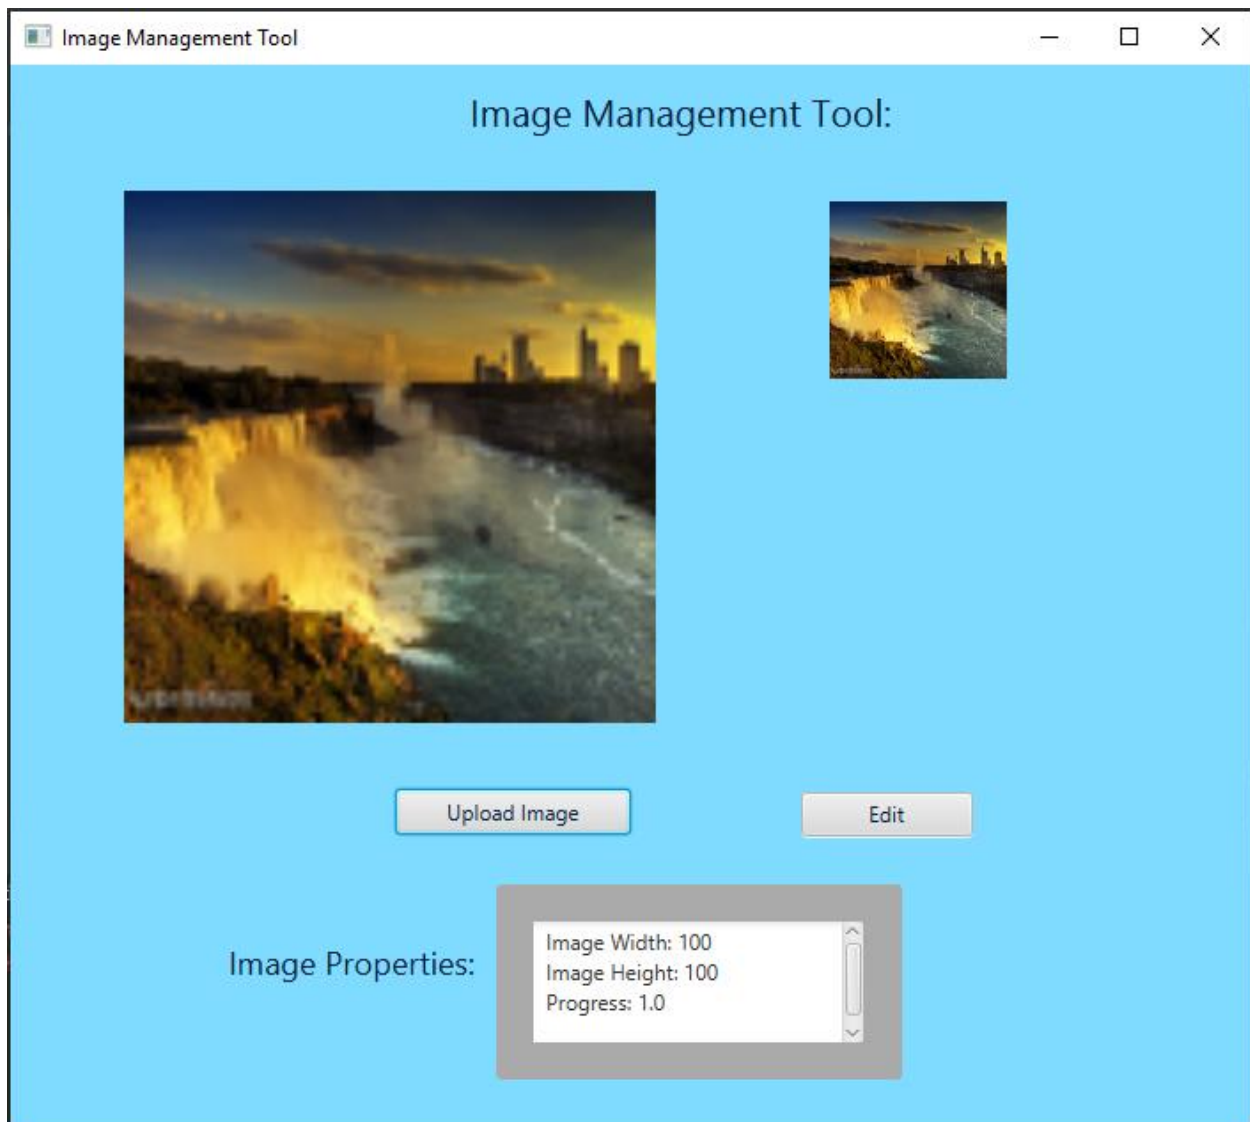

On upload click a new dialog box opens to select an image to upload from local computer

**Step 3:**

The image will be uploaded and its properties are displayed in the box below

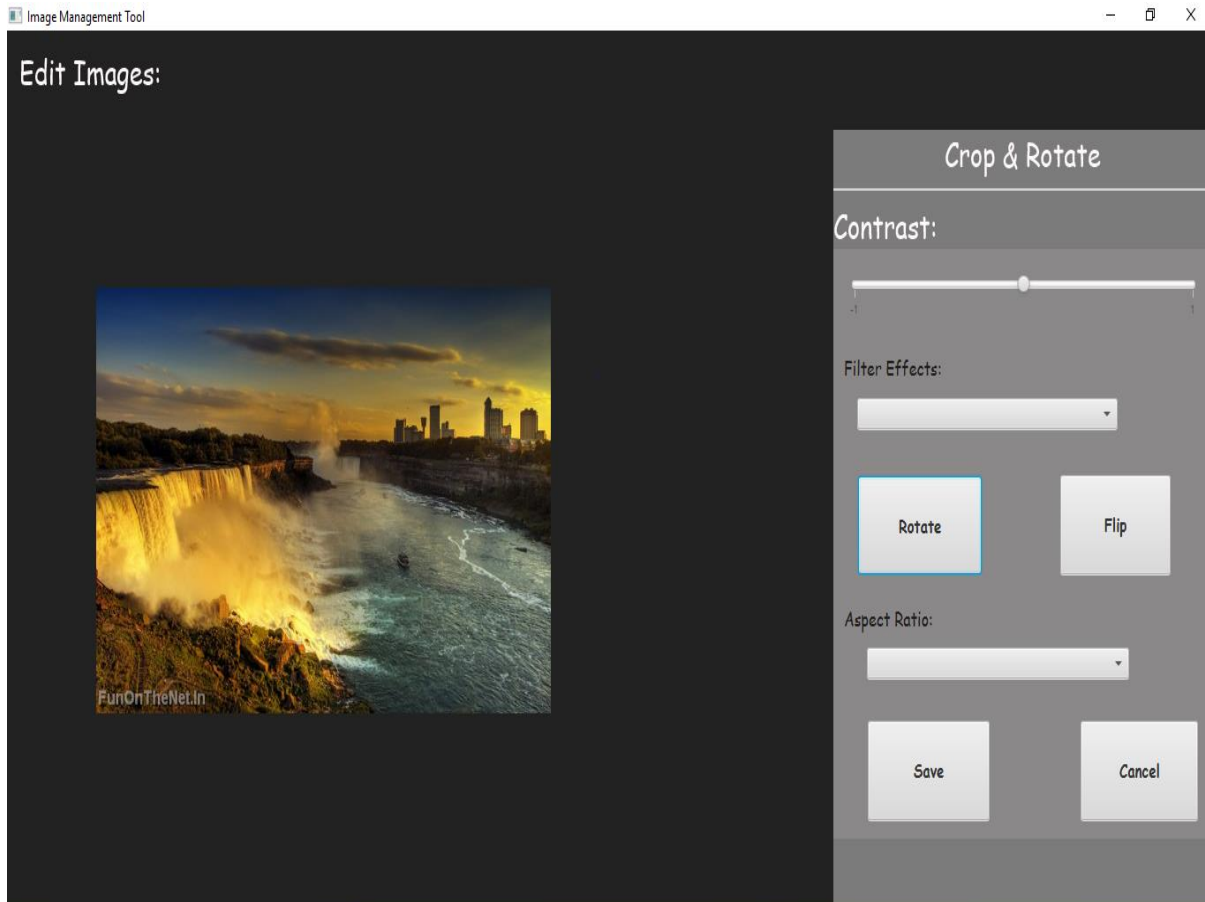

Now edit button is clicked

#### Step 4:

This is an edit screen. The functionalities we can add to the image is effects, rotate, contrast etc.

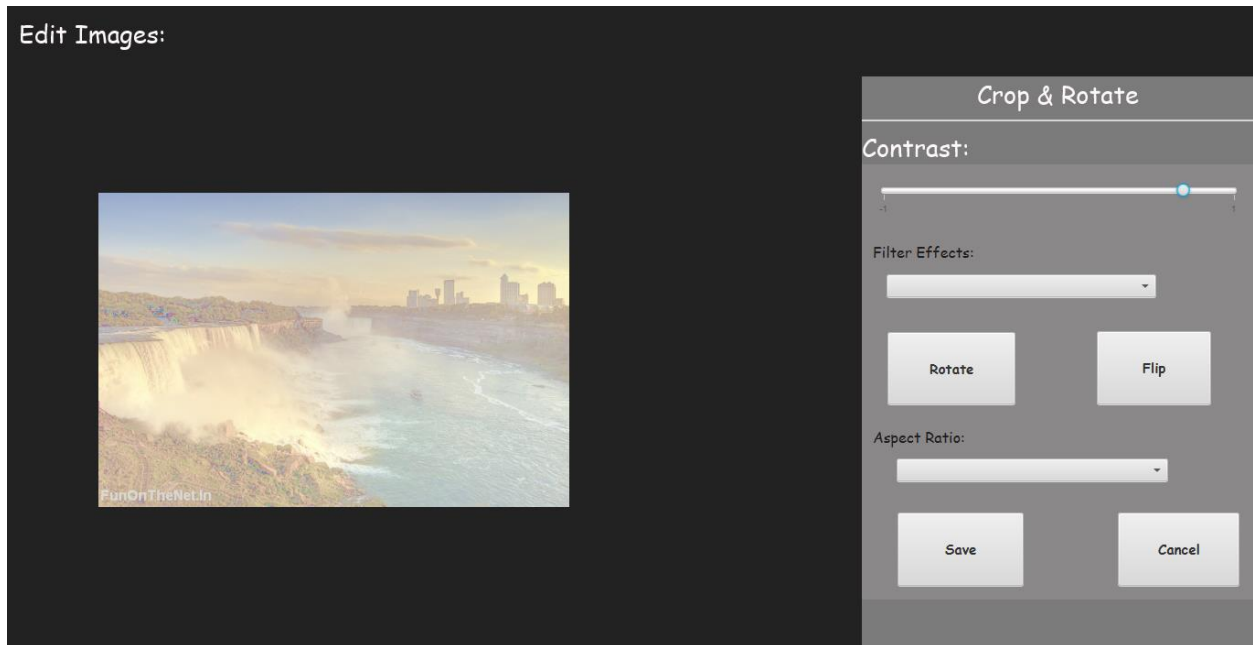

We can also save our image and cancel the changes made to original image.

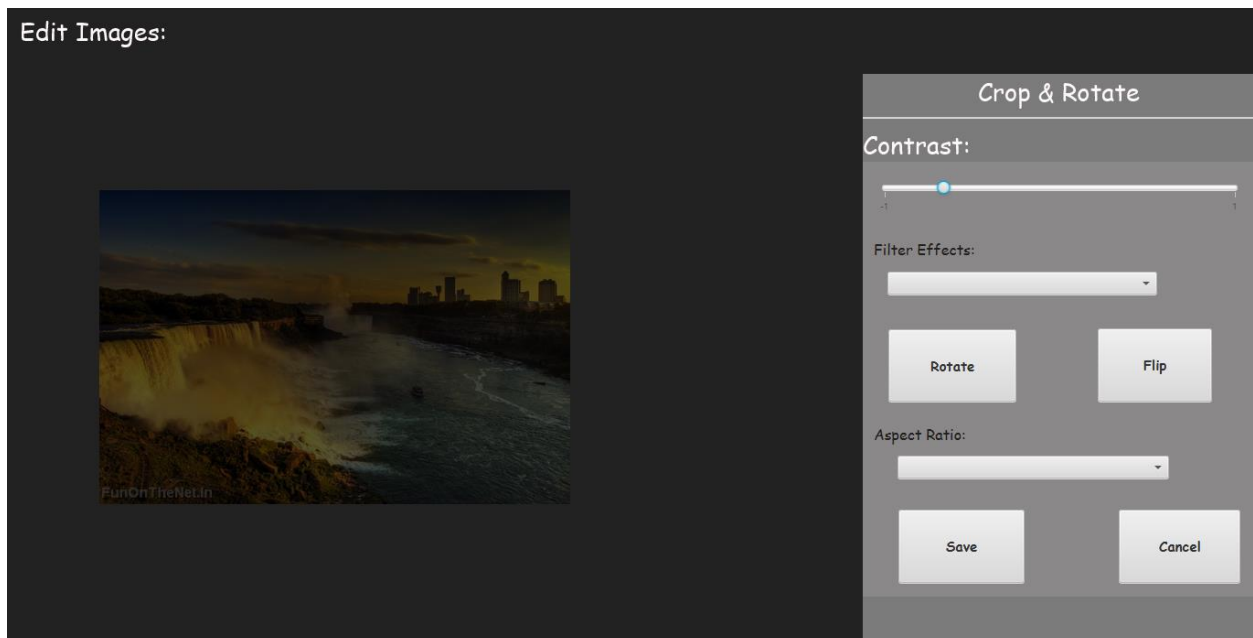

### Step 5:

Now let us see the **Contrast slider** functionality

The image's brightness is more if it is increased

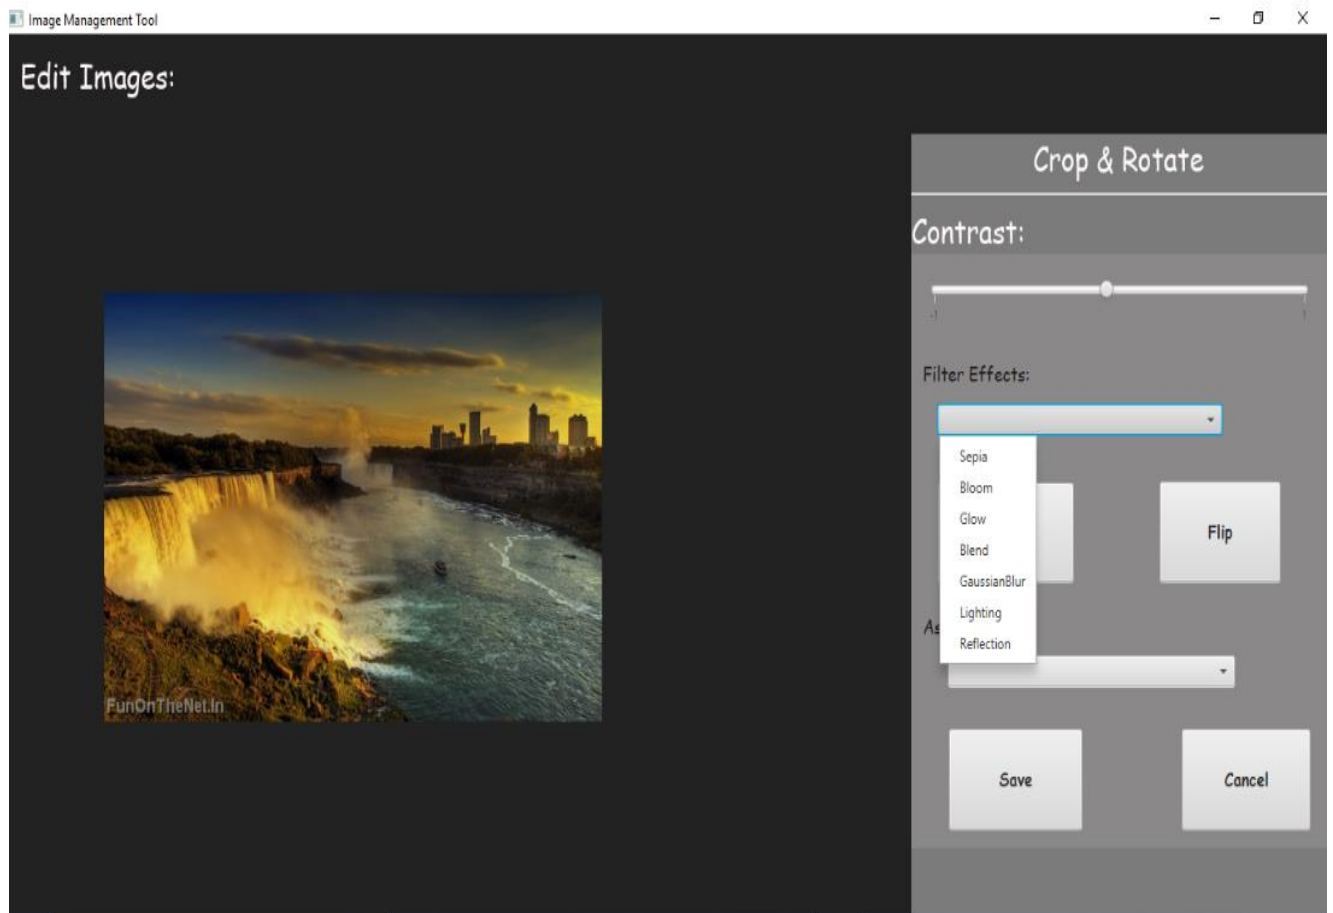

The image brightness will be decreased when the slider is below the default middle position as observed from below diagram.

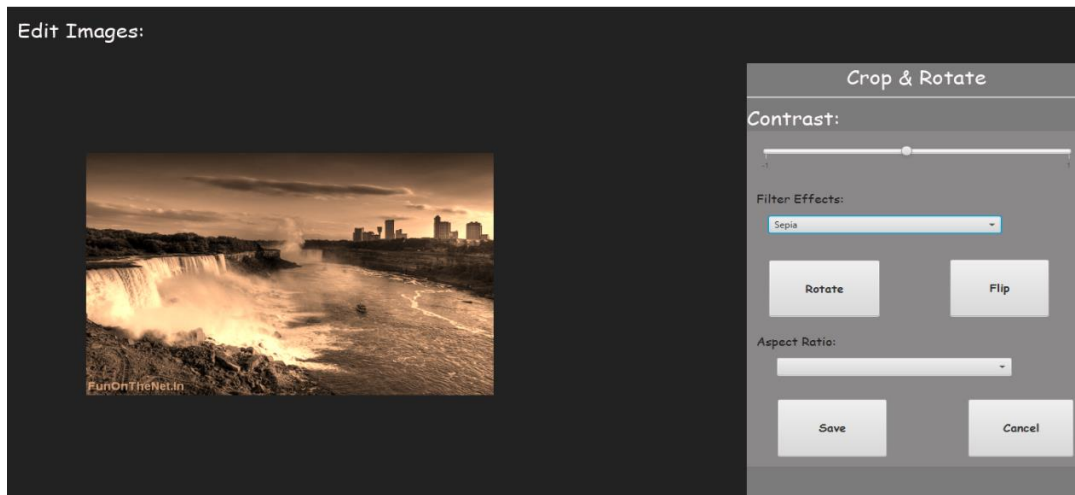

### Step 6:

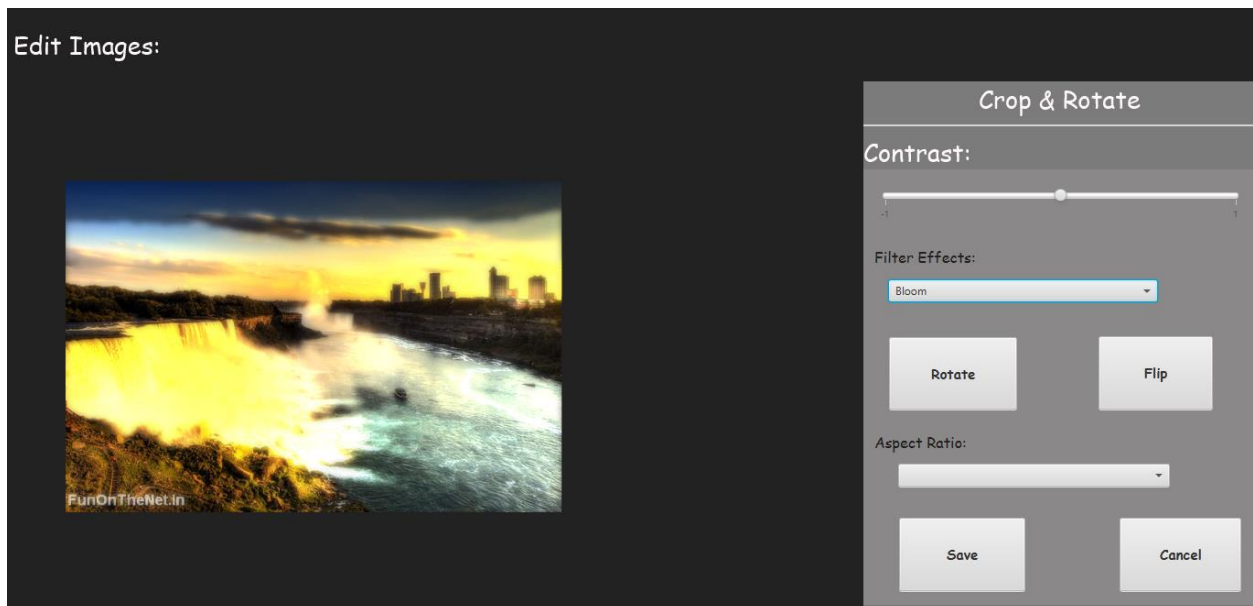

We can add various filter effect to our image and the choices are displayed in below image.

Sephia effect:

Bloom Effect:

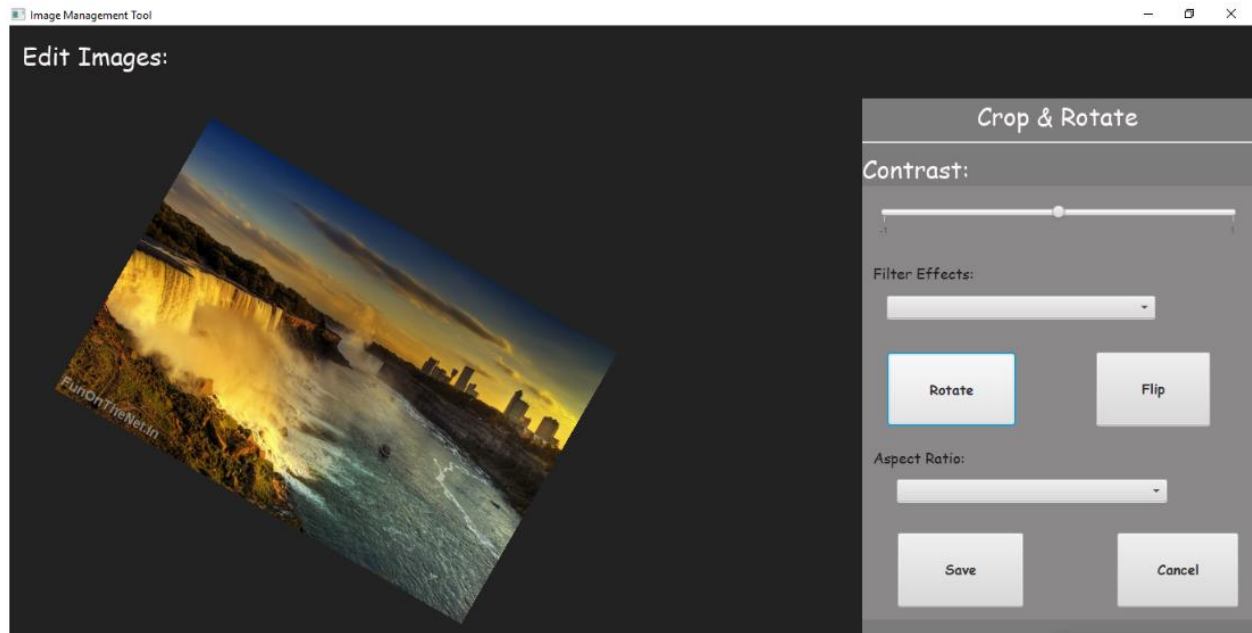

## Step 7:

### Image Rotation:

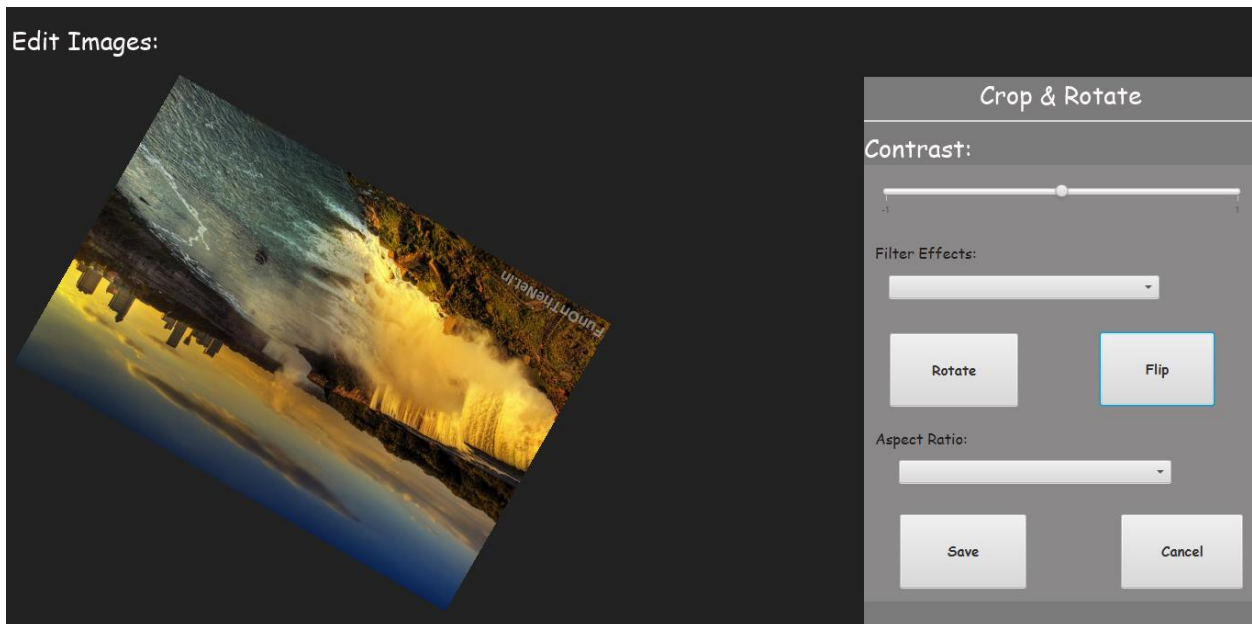

#### *Rotate:*

This function **rotates** the image in **clockwise** direction.

#### *Flip:*

This function **rotates** the image in **anti-clockwise** direction

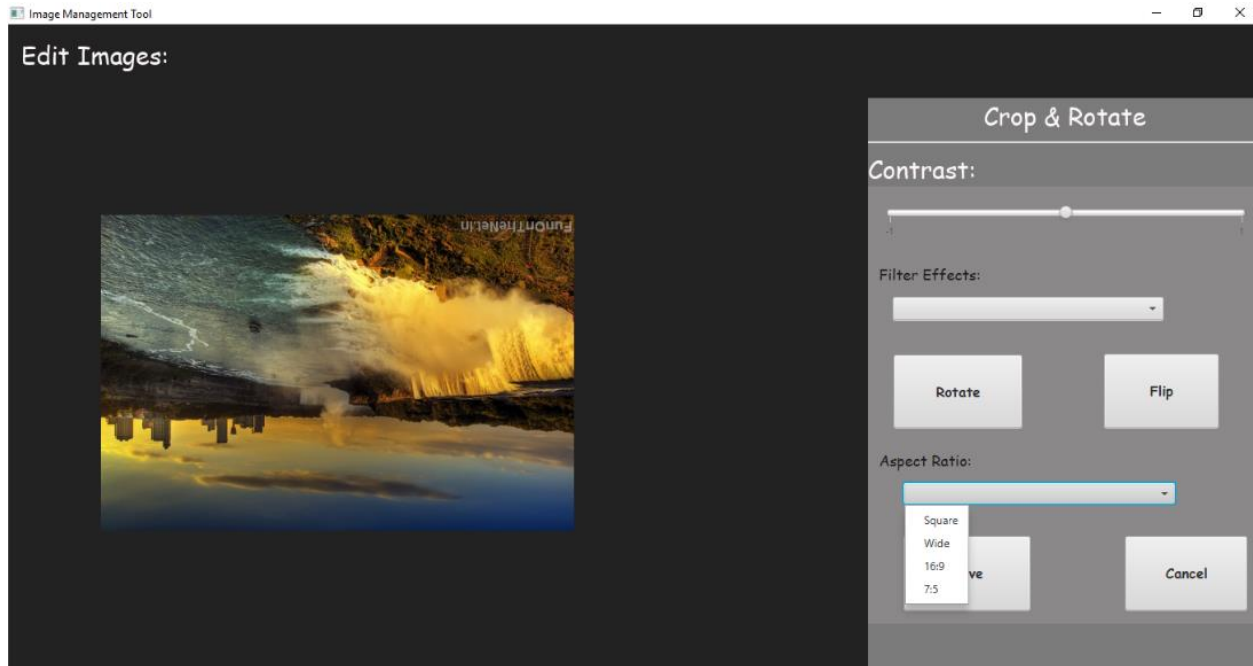

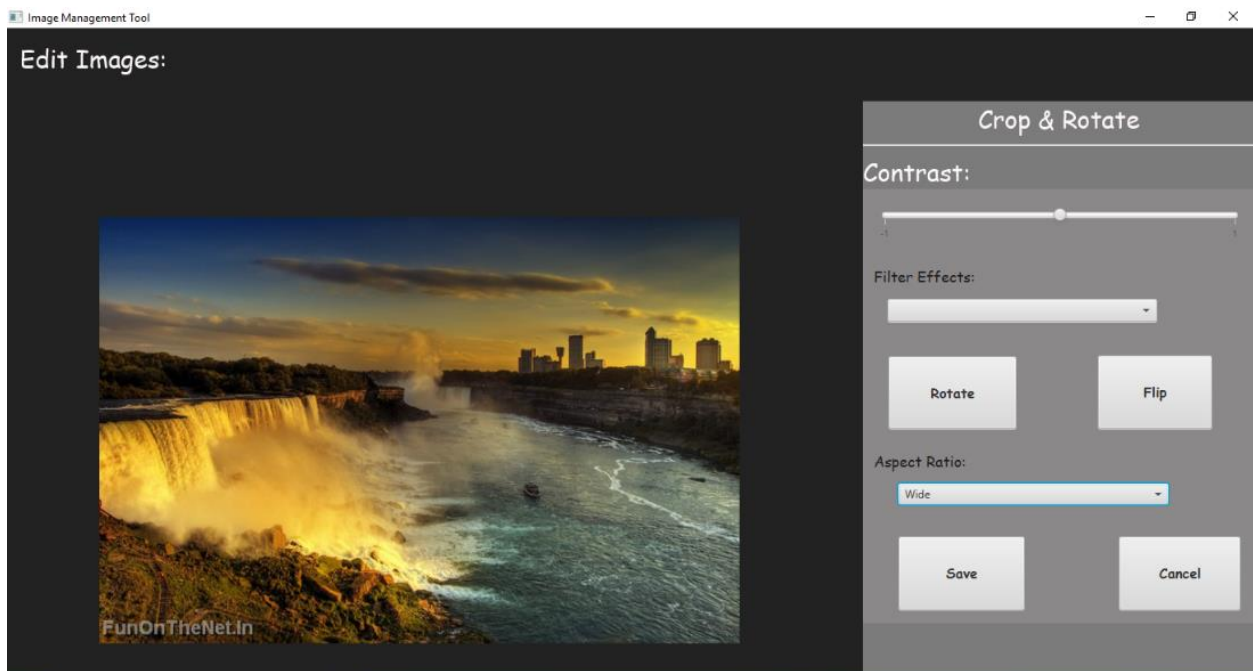

## Step 8:

### Aspect Ratio:

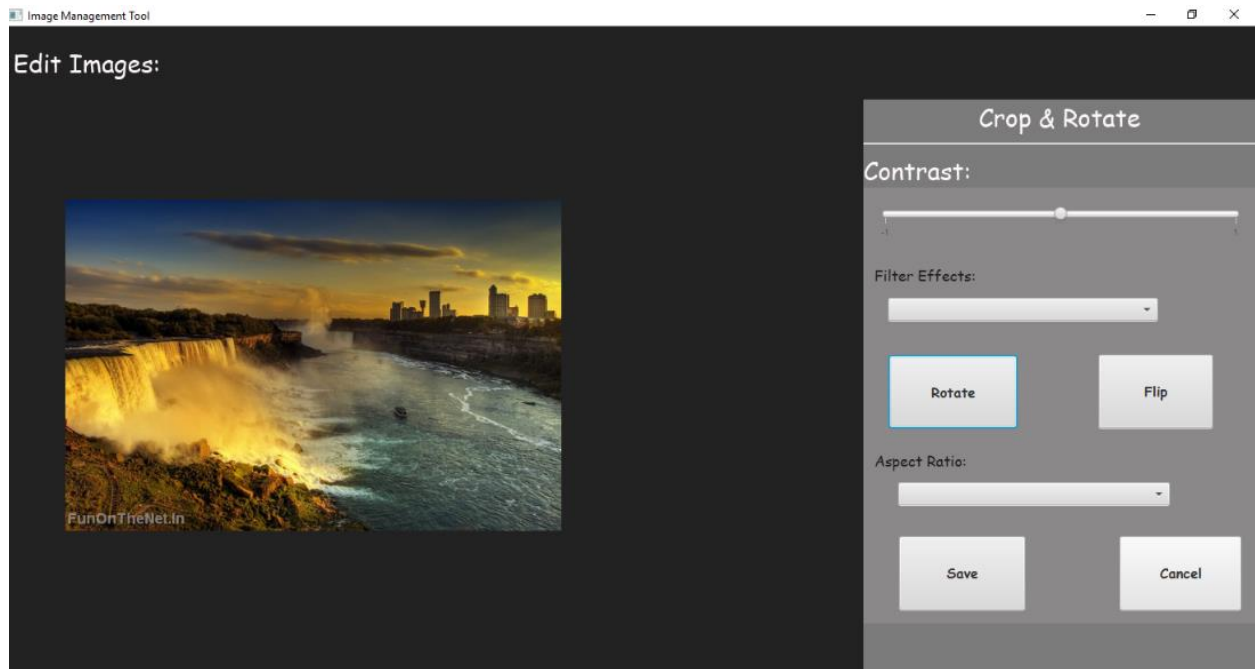

This functionality changes the **size** of the image.

### Wide Aspect Ratio:

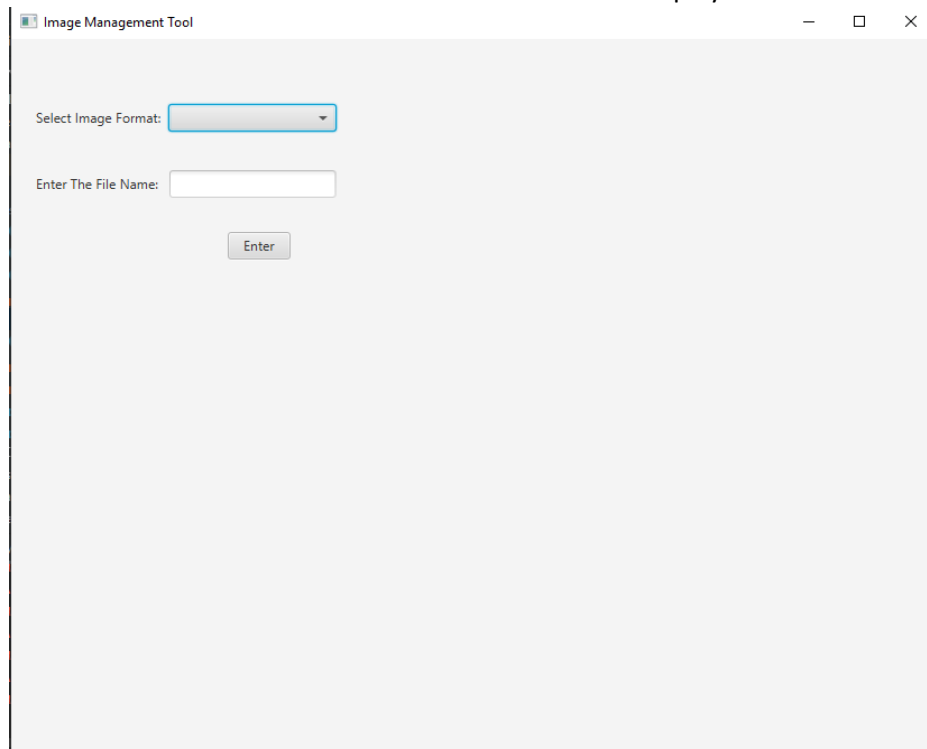

## Step 8: Cancel

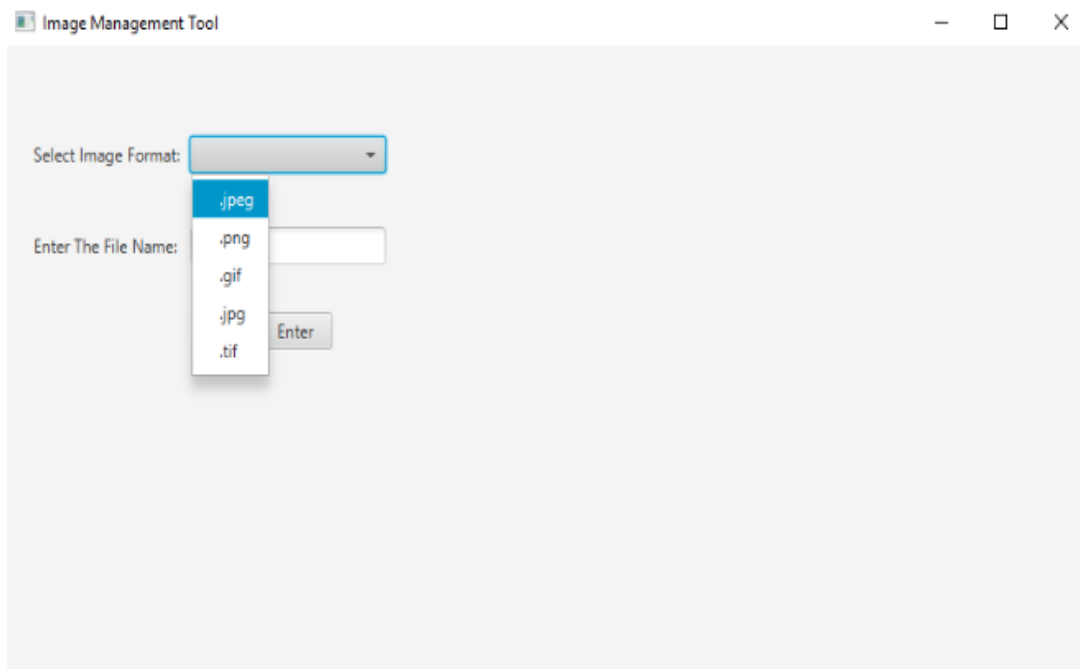

The cancel button reverts all the changes made and displays the original image

## Step 9:

Now when we click save button and a new screen is displayed .

We can select different formats for the image and also should enter the name of our edited image

Now when we enter our file format choice and its name and click the enter image a pop up box is displayed with the name of file and the location to which it is saved to is displayed in the pop-up box.
